

OUTLINE

I. Introduction

Brief introduction to CSS pseudo-elements

Introduce the four pseudo-elements:

`::before`

`::after`

`::first-letter`

`::placeholder`

Explain how pseudo-elements allow developers to style specific parts of HTML elements

II. `::before` Pseudo-Element

Definition of `::before`

Purpose: adds content before the actual content of an element

Common uses:

Adding icons

Adding decorative symbols

Creating visual effects

Show a simple `::before` code example

III. `::after` Pseudo-Element

Definition of `::after`

Purpose: adds content after the actual content of an element

Common uses:

Adding icons or symbols

Decorative effects

Creating additional visual elements

Show a simple `::after` code example

IV. `::first-letter` Pseudo-Element

Definition of `::first-letter`

Purpose: styles the first letter of text

Common uses:

Creating large first letters

Newspaper or magazine-style designs

Decorative text

Show a simple `::first-letter` code example

V. `::placeholder` Pseudo-Element

Definition of `::placeholder`

Purpose: styles the placeholder text inside input fields

Common uses:

Changing placeholder color

Changing font style or size

Improving form appearance

Show a simple `::placeholder` code example

VI. Comparison of the Four Pseudo-Elements

`::before` → adds content before an element's content

`::after` → adds content after an element's content

`::first-letter` → styles the first letter of text

`::placeholder` → styles placeholder text in input fields text
